RE: **MEASURING DEVICE NOTICE / SEAA 1116**  
**DISTRIBUTION ACCOUNT NO. 100750 / WATER RIGHT 95-701,702,4678**

Water User:

On April 6, 2006, the State Engineer initiated the referenced agency actions and sent you a notice of the statutory requirement to install and maintain a functional headgate control – return flow to river and cleaning of the Parshall flume measuring device on the ditch associated with the referenced distribution account and water right.

It has subsequently been reported to the State Engineer and verified by his representatives on July 12, 2006, that a headgate control was installed and the flume was cleaned. The water commissioner also wanted me to pass along a “Thank you for your efforts”, this control device and flume is a good example of how to properly installed canal system should be set up and operated.

The subject agency actions **can be formally concluded**. Your efforts to comply with these orders are commended and appreciated and we encourage you to maintain your diversion, canal and measuring device in the future.

Sincerely,

Mike Silva  
Distribution Engineer
